PRO-PELL-IT!

Propel Your Soil

®

PELLETIZED BIO-CHAR

- Excellent source of organic carbon
- Improves nutrient retention
- Increases organic matter in soils

Agriculture • Gardening • Lawns • Golf Courses • Landscapes • Ornamentals

PRO-PELL-IT!

Propel Your Soil

®

Pro-Pell-It!® products use only the finest ground Bio-Char for fast and efficient soil penetration. Pro-Pell-It! is an excellent choice for agriculture, gardening, home lawns, golf courses, landscapes, and ornamentals. These top quality, fine mesh products are bound together with a durable binder that eliminates dust and makes your applications easy.

An excellent choice where large equipment and dust are prohibited:

- New seedings or sod
- Established turf
- Gardens
- Trees
- Shrubs
- Potted plants
- Vineyards
- Orchards

PELLETIZED BIO-CHAR

- Easy to apply granules
- Promotes vigorous plant growth
- High pH value
- High cation exchange capacity
- Helps to structure soils
- Increases fertilizer availability to plants
- Improves water absorption and retention
- Environmentally friendly

Guaranteed Analysis:

Calcium (Ca)25%
 Iron (Fe)0.7%

Derived from 100% clean pyrolyzed woody biomass

Available in Standard and Mini Size Pellets

WHY BIO-CHAR?

Soil's Best Friend:

Bio-Char's chemical and physical structure gives it the unique ability to attract and hold nutrients, moisture, microorganisms and agrochemicals. Even hard to hold nutrients like nitrogen and phosphorus are retained.

Enhanced Crop Yields:

Fertilizer supplemented with Bio-Char can outperform fertilizer alone by 60%. Relatively inert, Bio-Char can persist in soil for thousands of years, along with the inherent benefits of water and nutrient retention and overall soil porosity.

Sustainable Environment: All Pro-Pell-It! Bio-Char products are derived from clean pyrolyzed woody biomass. Bio-Char retains up to 85% of atmospheric carbon, effectively sequestering it for thousands of years in the form of persistent organic matter.
